

UI / UX DESIGN BRIEF

Calm Precision, Ambient Aura

The visual language, design tokens, component system, and key screens of AuraFit AI.

What's Inside

01 Design Philosophy

"Calm precision" — a clinical dashboard wrapped in a warm, ambient glow.

02 Color System

The Aura gradient, neutral scale, and semantic macro colors.

03 Typography

Type families, scale, and usage rules across display and UI text.

04 Spacing, Grid & Elevation

The 8px system underneath every layout decision.

05 Component System

shadcn/ui components as themed for AuraFit AI.

06 Key Screens

Layout intent for the six primary application surfaces.

07 Motion & Accessibility

Micro-interaction rules and the accessibility bar every screen must clear.

01 — DIRECTION

Design Philosophy

AuraFit AI should feel like a precision instrument, not a gamified consumer app. The visual language borrows the ambient "aura" glow of the brand mark — a soft violet-to-teal gradient — and contains it inside an otherwise restrained, data-forward interface. Numbers are the hero; decoration is minimal.

Clinical, not clinical-cold

Dense data (macros, targets, trends) is presented with generous whitespace and a warm dark canvas, not sterile hospital-white.

Dark-first

Primary theme is dark — used at the gym, kitchen counter, or late at night — with a fully-supported light theme for daytime desk use.

Trust as a visual cue

A persistent, quiet "Local & Private" indicator in the shell reinforces the core promise without needing a paragraph to explain it.

02 — PALETTE

Color System

2.1 Brand & Surface

**Aura Gradient**

#7C3AED → #0D9488

**Violet 500**

#7C3AED

**Teal 600**

#0D9488

**Canvas / Dark**

#0B0F19

**Surface / Dark**

#171922

**Canvas / Light**

#FFFFFF

2.2 Semantic Macro Colors

Each macronutrient keeps one fixed color everywhere in the product — charts, rings, badges — so a user can identify "protein" by color alone within a week of use.

Protein
#3B82F6

Carbohydrates
#F59E0B

Fat
#F43F5E

Fiber
#10B981

Over Budget
#DC2626

On Target
#059669

03 — TYPE

Typography

Poppins Display & headings. Geometric, confident, used for section titles and the large calorie/macro hero numbers.	Inter UI & body text. Neutral, highly legible at small sizes for tables, labels, and dense settings screens.	JetBrains Mono Numeric & data. Used for gram/calorie figures inside tables so digits align in fixed-width columns.
DISPLAY	2,140 kcal	Poppins / 700
H1	Today's Progress	Poppins / 700
H2	Macro Breakdown	Poppins / 600
BODY	You have 480 kcal remaining today.	Inter / 400
CAPTION	Last synced from local database	Inter / 400
NUMERIC / MONO	184.2g protein	JetBrains Mono

04 — STRUCTURE

Spacing, Grid & Elevation

8px Base Grid All padding, margin, and gap values are multiples of 8px (4px permitted only for icon-to-label micro gaps). Layout columns snap to a 12-column grid with a 24px gutter.	Radius Scale sm 6px (badges/inputs) · md 10px (cards) · lg 16px (modals, the vision drop-zone) · full for pills and avatars.
---	--

Elevation	Usage	Shadow
Level 0	Page canvas	None
Level 1	Cards, table rows on hover	0 1px 2px rgba(0,0,0,.12)
Level 2	Dropdowns, popovers	0 4px 12px rgba(0,0,0,.18)
Level 3	Modals (verification table, setup wizard)	0 12px 32px rgba(0,0,0,.28)

05 — BUILDING BLOCKS

Component System

Built on shadcn/ui primitives, themed to the AuraFit palette rather than restyled from scratch — this keeps accessibility behavior (focus rings, ARIA) intact for free.

Component	shadcn/ui Base	AuraFit Usage
Macro Ring	Custom (Recharts RadialBar)	Daily calorie/macro progress on the Dashboard, colored per semantic macro palette.
Verification Table	Table + Input	Editable rows for vision-logged items; low-confidence rows highlighted with an amber left-border.
Drop Zone	Card (custom dashed variant)	Drag-and-drop / webcam capture target for meal photos, 16px radius, dashed accent border.
Goal Selector	ToggleGroup	Aggressive Fat Loss / Lean Bulk / Recomposition / Maintenance, single-select segmented control.
Guardrail Chips	Badge	Active diet + allergy constraints shown as removable chips across onboarding and recipe screens.
Trend Chart	Recharts LineChart	Weight velocity and macro compliance over time, teal accent line with gradient fill.
Recipe Card	Card	Pantry-generated recipes with prep time badge, macro chip row, and expandable steps.

06 — SCREENS

Key Screens

6.1 Dashboard — Flagship Layout

Left nav rail (Dashboard, Log Meal, Recipes, Progress, Settings) · hero calorie bar + macro ring at top · three macro strips beneath · trend chart anchors the bottom third.

Vision Logger

Full-bleed drop zone as the primary surface; webcam toggle in the top-right. On drop, transitions directly into the Verification Table — no intermediate loading screen beyond an inline shimmer.

Verification Table

Editable rows grouped under the detected plate photo thumbnail. Confidence badges (**High** **Med**) sit left of each item; a running total updates live as grams are adjusted.

Recipe Generator

Two-pane layout: pantry ingredient chips on the left, generated recipe cards on the right, each showing remaining-macro-budget fit as a small compatibility bar.

Progress & Analytics

Tabbed view — Weight, Macro Compliance, Logging Streak — each a full-width Recharts panel with a projected goal-completion date pinned in the header.

Onboarding / Biometrics

Single-column wizard, one question group per step (stats → goal → dietary guardrails), progress dots at top, large numeric inputs with unit toggles (kg/lb, cm/in).

Settings & Privacy

A dedicated "Local & Private" panel surfaces the network-monitor status live, plus one-click CSV/JSON export and model management (installed Ollama models, disk usage).

07 — FEEL & ACCESS

Motion & Accessibility

Motion Principles

- 150–200ms ease-out for hover/press states
- Macro rings animate fill on data change, never on idle
- Page transitions are simple cross-fades — no parallax or bounce, to keep focus on data

Accessibility Bar

- WCAG 2.1 AA contrast in both themes
- Full keyboard navigation, visible focus rings on every interactive element
- Charts include a text-table fallback view for screen readers

THEME PARITY

Every screen in this brief is designed dark-first, then verified in light mode using the same tokens with inverted neutrals — never a separate design pass.
